Banking Information System

Project Overview

The Banking Information System project is an ambitious endeavor aimed at developing a comprehensive and user-friendly banking application. The primary objective of this project is to create a robust and efficient system that enables users to perform various banking operations securely and conveniently. The project encompasses several essential modules, each designed to fulfill specific functionalities within the banking system.

Modules Progress:

User Registration: User registration has been successfully completed along with database connectivity.

Deposit and Withdrawal: Deposit and Withdrawal module is under development.
